Charles Waggoner Named New Chair of SPFA's Low-Density Foam Committee (LDC).

Arlington, TX — Charles Waggoner of DEMILEC (USA) LLC® has been appointed as the new Chair of SPFA's, Spray Polyurethane Foam Alliance, Low-Density Foam Committee (LDC).

Upon Charles' retirement as an officer in the U.S. Air Force, he founded Comfort Masters LLC in 1994, a spray foam insulation contractor servicing the Oklahoma City, Oklahoma area. After more than ten years of experience as a SPF contractor, he joined DEMILEC (USA), where he currently serves as a Product Engineer.

“Charles will bring a unique perspective to this committee based on his experience as a SPF contractor and working for a systems supplier,” said Richard S. Duncan, Technical Director for the SPFA.

The Low-Density Foam Committee (LDC) was formed in 2004 to provide manufacturers and applicators of low-density SPF insulation with an open forum to discuss common issues and opportunities to develop programs that further the use of low-density SPF insulation. For the purpose of the committee, low-density SPF insulation is defined as spray polyurethane foam having a nominal density of less than one point per cubic foot and is used primarily as an interior insulation and air barrier. For more information, or to become a member of the Low-Density Foam Committee or the Spray Polyurethane Foam Alliance, please visit www.SprayFoam.org.

“Low density foam has been around for well over a decade and has earned a well deserved reputation as a superior insulation because of its unique properties and characteristics,” said Charles Waggoner, Product Engineer for DEMILEC (USA) LLC. “I feel that it will continue to be a strong force in solving many of the energy and environmental issues we face
